

Elevating HealthAI's Global Voice and Convening the Future of AI Governance

The Challenge

HealthAI is building a global movement around responsible artificial intelligence in health, operating in a fast-moving environment where policy, technology and public debate are evolving at pace.

The organisation needed to strengthen its external visibility and establish a clear, credible voice across global media, while engaging policymakers, health leaders and the wider AI ecosystem around its mission.

Alongside this, HealthAI required an experienced communications and events partner to deliver its 2026 Global Governance Forum, bringing together international leaders to advance practical conversations around the governance of AI in health.

The Solution

We are working as an integrated extension of the HealthAI team across global PR, strategic communications and the delivery of the 2026 Global Governance Forum.

Our ongoing press office programme is focused on strengthening HealthAI's visibility, sharpening its external narrative and identifying opportunities to position the organisation and its leadership within global conversations on responsible AI and health governance.

In parallel, we are leading the planning and delivery of the Global Governance Forum in London. Our work spans programme development, participant and speaker engagement, event communications, registration, partnerships, logistics and end to end project management.

Together, the work is helping HealthAI build greater global recognition while creating a high-level platform for the people shaping the future governance of AI in health.
